**APPENDIX A - Bacteria and Manganese Sample Results**

**APPENDIX B - Water Use & Monitoring Well Reports**

## **1) Introduction:**

The 2023 Whitehead Elton Regional Water Cooperative Inc. Annual Report summarizes the water utility's ability to provide safe economical potable water and comply with provincial standards.

## **2) Description of the Water System:**

The Whitehead Elton Regional Water Cooperative Inc. provides potable water to a population of approximately 2400 residents. Corrective Actions were taken and reported as required throughout the course of operations. Full results have been attached in Section 3.

The Whitehead Elton Regional Water Cooperative Inc. water system consists of a network of pressure pipelines, a water treatment plant, a booster station, a pressure reducing station and a water storage reservoir. The Whitehead Elton Regional Water Cooperative Inc. owns the Alexander Water Treatment Plant, Dungannan Pressure Reducing Station, Co-op Booster Station and the Forrest Reservoir.

The R.M. of Elton owns three pressure reducing stations and one booster station located east of #10 Highway and north of #1 Highway.

The R.M. of Whitehead owns the pressure reducing station located south of the #1 Highway down Road 115W.

### **2.1) Water Supply Source**

The Whitehead Elton Regional Water Cooperative Inc. receives its water supply from two wells located in the R.M. Of Whitehead. The wells are situated to draw raw water from a sand and gravel aquifer.

The system provides treated water to the R.M. Of Elton, the villages of Forrest and Douglas, the R.M. Of Whitehead, the villages of Alexander and Kemnay and a few residents of the R.M. Of Riverdale and the R.M. Of Cornwallis.

### **2.11) Water Treatment Process:**

The water treatment process is designed to remove hardness, iron, manganese, total dissolved solids, turbidity and arsenic from the raw water supply to meet the water quality standards outlined in the *Guidelines for Canadian Drinking Water Quality (GCDWQ)*. The plant currently provides virus inactivation through chlorine treated water obtaining adequate contact time within the treated water reservoirs.

Re-Chlorination is available at the Forrest Reservoir, but it is not in use. The average daily flow through the Alexander Water Treatment Plant of raw water is 802 cubic meters per day, with the plant rated at a maximum daily flow of raw water of 1,814.4 cubic meters per day and a yearly raw water total of 387,000 cubic meters.

Raw water is diverted from a sand and gravel aquifer by two wells located approximately 2.5 km NE of the Alexander Water Treatment Plant. The well pumps deliver water to the WTP through a 150 mm HDPE raw water pipeline. Water passes through the reverse osmosis (R.O.) system to remove hardness, iron, manganese, total dissolved solids and turbidity. Following the R.O. unit, permeate water is passed through a membrane contactor to remove carbon dioxide in the permeate water, therefore increasing the pH. Bypass water (raw water) passes through a 1.4 m diameter manganese greensand filter to remove iron and manganese allowing for hardness and pH adjustment in the treated water. A portion of the permeate water is also passed through the greensand filter for arsenic removal. Treated water from the R.O. unit is pH buffered by with Sodium Hydroxide injection. The combined R.O. unit and greensand treatment streams are chlorinated prior to entering the 950 cubic meter, 7 cell reservoir. The distribution pumps send water through a 200 mm pipeline to the distribution system.

Iron and Manganese are metals that cause laundry and plumbing fixture staining problems and can accumulate in the distribution pipes and cause reduced flow. Calcium Carbonate causes hardness in the water which diminishes the ability of the water to react with soap and lather. Hardness also forms scale deposits in kettles, hot water tanks and plumbing fixtures which can reduce their life expectancy.

### ***2.III) Classification and Certification***

- The Alexander Water Treatment Plant is a Class 2 water treatment facility.
- The Whitehead Elton Regional Water Co-operative Inc. water distribution system is Class 1.
- The R.M. Of Whitehead's distribution system is Class 1.
- The R.M. Of Elton's distribution system is Class 1

The Facility classifications are used to determine certification requirements for the water system operators. The requirements fall under the Water and Wastewater Facility Operators Regulation under the Environment Act.

### ***3) List of Water Quality Standards***

#### ***3.1) Water Quality Standards and Monitoring Requirements***

The Province of Manitoba has adopted several water quality standards from the Health Canada *Guidelines for Canadian Drinking Water Quality*. The health-based parameters express the *maximum acceptable concentrations, or MAC*, for drinking water. Concentration values in excess of the guidelines constitute a health-related issue and require corrective actions. All health-based parameters were within the limits in 2023 for Whitehead Elton Regional Water Co-operative Inc. and both R.M.'s.

All public water systems (PWS) are required to monitor chlorine residual levels daily. Monitoring is done daily at both the Alexander Water Treatment Plant and the Forrest Reservoir. Results are recorded and at the end of each month, results are forwarded to our Provincial Drinking Water Officer. Copies of the originals must be kept on file and on hand for **TWO YEARS** at each facility.

Bacterial Testing for Total Coliforms and E.coli are done every two weeks, with sample sets being separated by at least 12 days. Chlorine residuals are tested in the distribution system at the same time and location as bacterial samples. All results are kept in the files at the Water Treatment Plant for a period of 2 years.

### **3.II) 2023 General Chemical Analysis**

As part of the operating licence for Whitehead Elton Regional Water Co-operative Inc., a general chemical analysis of the raw water, treated water and midpoint of the distribution system must be done every **Three years**. Water samples were sent to the lab on October 18th, and we will be required to be sample again in 2026.

It is an extensive test including a physical test, Anions and Nutrients, Organic/Inorganic Carbon, Total Metals and Volatile Organic Compounds tests.

The tests are conducted at ALS Labs in Winnipeg. The results are on the following page. The highlighted areas on the results indicate that the raw water exceeds Aesthetic Objectives or Maximum Acceptable Concentrations cited in the *Guidelines for Canadian Drinking Water Standards*. None of the treated water produced exceeds MAC limits or Aesthetic Objectives.

If there are questions that you may have regarding the lab results, please use one of the contact numbers listed and we can assist in any questions or concerns.

### **3.III) Arsenic Test**

As part of our license with ODW, the Whitehead Elton Regional Water Co-operative Inc. is required to conduct arsenic testing .The results of the Arsenic test are in the General Chemical Analysis.

# CERTIFICATE OF ANALYSIS

Work Order : **WP2326968** Page : 1 of 6

Client : **Manitoba Conservation & Climate** Laboratory : **ALS Environmental - Winnipeg**

Contact : **RETIRED Melanie Betsill** Account Manager : **Sheriza Rajack-Ahamed**

### General Comments

The analytical methods used by ALS are developed using internationally recognized reference methods (where available), such as those published by US EPA, APHA, Standard Methods, ASTM, ISO, Environment Canada, BC MOE, and Ontario MOE. Refer to the ALS Quality Control Interpretive report (QCI) for applicable references and methodology summaries. Reference methods may incorporate modifications to improve performance.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

Please refer to Quality Control Interpretive report (QCI) for information regarding Holding Time compliance.

Key : CAS Number: Chemical Abstracts Services number is a unique identifier assigned to discrete substances  
 LOR: Limit of Reporting (detection limit).

Unit	Description
-	no units
%	percent
% T/cm	% transmittance per centimetre
µg/L	micrograms per litre
µS/cm	microsiemens per centimetre
AU/cm	absorbance units per centimetre
CU	colour units (1 cu = 1 mg/l pt)
meq/L	milliequivalents per litre
mg/L	milligrams per litre
NTU	nephelometric turbidity units
pH units	pH units

<: less than.

>: greater than.

Surrogate: An analyte that is similar in behavior to target analyte(s), but that does not occur naturally in environmental samples. For applicable tests, surrogates are added to samples prior to analysis as a check on recovery.

Test results reported relate only to the samples as received by the laboratory.

UNLESS OTHERWISE STATED ON SRN or QCI Report, ALL SAMPLES WERE RECEIVED IN ACCEPTABLE CONDITION.

### Qualifiers

Qualifier	Description
DLM	Detection Limit Adjusted due to sample matrix effects (e.g. chemical interference, colour, turbidity).
HTD	Hold time exceeded for re-analysis or dilution, but initial testing was conducted within hold time.
RRV	Reported result verified by repeat analysis.

#### ***4) Water System Incidents and Corrective Actions***

There were no incidents or corrective actions needed in 2023.

#### ***5) Drinking Water Safety Orders, Warnings and Charges***

On March 8<sup>th</sup>, a boil water advisory was issued after a water line repair took place on Highway #10, between Road 62N and Road 63N. It was rescinded after all bacteriological samples were done and results indicated water was safe for consumption.

#### ***6) Major Expenses Incurred***

In 2023, we replaced the drop pipes in both of our raw water wells to stainless steel.

## **7) Current/Future System Expansions**

In 2023, further investigations were done to find a suitable location for an additional raw water well with the hope for a 2024 install date.

### ***Appendix A***

Appendix A contains all the bacterial test results for all 3 Public Water Systems as well the newly implemented manganese testing. Four sets of manganese samples are taken every third year. The next year we will conduct our manganese sampling will be 2026.

### ***Appendix B***

Appendix B contains the 2023 Water Use Report that must be sent to the Provincial Government and the Monitoring Well Graph Reports . The Monitoring Wells are checked periodically throughout the year. One well is located at the raw water supply wells and the second is located a quarter of a mile south. These Monitoring Wells are a daily snapshot on the health of the aquifer we draw our water from.

# APPENDIX B

2023 Water Use Report

Monitoring Well Graph Report

**Annual Water Use Report for 20 23**

Pursuant to *The Water Rights Act*

LICENSÉE'S NAME: <b>Whitehead Elton Regional Water Co-operative Inc.</b>		LICENCE NO. <b>PWS-11-487</b>
POST OFFICE ADDRESS <b>General Delivery, Forrest MB R0K 0W0</b>		PHONE NO. <b>204 728 7834</b>
SOURCE OF WATER SUPPLY (CHECK ONE) <input checked="" type="checkbox"/> WELL <input type="checkbox"/> SURFACE WATER _____ <small>(Name of River, Creek, etc.)</small>		
LOCATION OF PUMP (OR WELL):		
QUARTER	SECTION	TOWNSHIP
<b>SE</b>	<b>21</b>	<b>10</b>
		RANGE
		<b>21</b>
		OR OTHER (SPECIFY)
		<b>W1</b>
DESIGN PUMPING RATE: LITRES PER SECOND <u>22.7</u> OR OTHER (SPECIFY) _____		
NOTE 1: QUANTITIES OF WATER IN TABLE BELOW EXPRESSED IN (CHECK ONE)		
<input type="checkbox"/> LITRES <input type="checkbox"/> DECAMETRES		
<input checked="" type="checkbox"/> OTHER (SPECIFY): <u>Cubic Meters</u>		

METER READING DECEMBER 31/20 22 **662083**
